

VISION

Enhance healthcare through disruptive innovation

MISSION

Implement and evaluate innovative and disruptive technologies

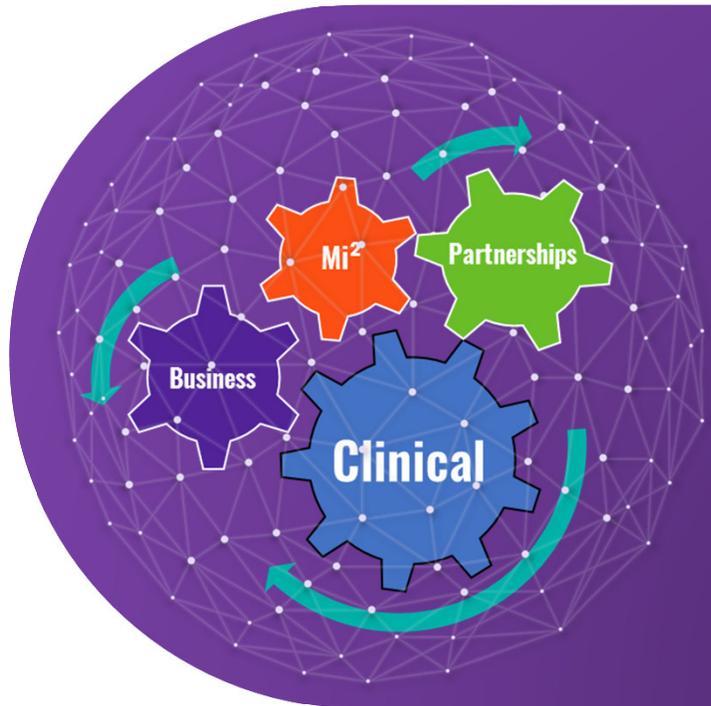

VALUES

We are committed to the well-being of our communities

We are patient and provider focused

We are naturally curious

We celebrate successes and failures

Strategic Priorities

Develop and implement sustainable disruptive innovations in healthcare

- Develop strategic partnerships with healthcare innovators
- Develop and implement Internet of Healthcare Things (IoHT)TM solutions

Enabling smarter healthcare design by building value-added processes

- Collaborate with clients to develop tailored solutions
- Adopt and implement value-based innovation processes to support the health system

Diffusion of healthcare innovations

- Become the “go-to” source for implementation and evaluation of disruptive innovations
- Facilitate collaborations with health innovators and industry partners to develop patient-focused innovations

ABOUT Mi²

In 2013, Mackenzie Health (MH) embarked on an exciting journey to transform the organization’s capacity to engage in innovative health care delivery. MH built partnerships with industry and academia and established an evaluative focus on implementation, usability, adoption and scalability of disruptive innovations, predominately in healthcare technology. Committed to build and develop the advanced technological infrastructure necessary to support innovations, MH launched the Mackenzie Innovation Institute (Mi²) on June 24, 2015 to provide both internal and external consulting support, and management services for all health innovation related projects. Our applied innovation approach enables stakeholders such as patients, clinicians and other staff to define problem statements and for Mi² to then source, develop and facilitate implementation of relevant solutions in collaboration with industry partners. Telemedicine, predictive diagnostics, wearable sensors, AI chatbots, and a host of new apps will transform how people manage their health. Mi² is positioned as a leader in healthcare applied innovation with a focus to ensure sustainability and long term success. Mi² works with industry and academic partners to identify new technologies and processes, often disruptive in nature that can more effectively solve healthcare problem statements.

INNOVATION INITIATIVES

SUPPORT THE SMART HOSPITAL VISION

As part of Mackenzie Health’s ‘smart systems’, Mi² will engage in both internal and external consulting services to empower users with innovative problem solving tools.

SMART CLINICAL SOLUTIONS

Mi² will support with project management and the development of smart clinical solutions that will enhance and increase clinical efficiency.

INTERNET OF HEALTHCARE THINGS (IoHT)™

Part of the IoHT vision is an integrated health strategy which will link care within the hospital, the community, and the home. Mi² will engage in strategic business development opportunities that will propel the IoHT vision.

INNOVATION SANDBOX

By using hardware and software simulations in controlled lab environments, Mi² will evaluate and identify novel approaches that can be scaled and implemented to provide quality patient care in different clinical environments.
